Santiago Monrroy López

Senior QA Analyst & Technical Quality Specialist
Bogotá, Colombia | santilopez397@gmail.com | +57 3195721674
GitHub | LinkedIn | Portfolio

PROFESSIONAL SUMMARY

Technical QA Analyst with 3+ years of experience and a strong software development background. Specializes in comprehensive quality strategies across the entire software development lifecycle (SDLC), combining stabilization and release phase execution, regression testing, technical support, and metrics reporting with deep backend validation (RESTful APIs, relational SQL databases, and Clean Architecture). Passionate about team mentorship, technical documentation standardization, and delivering qualitative feedback to bridge the gap between design, product, and engineering, grounded in the conviction that top-tier quality comes from a team that learns and adapts together.

WORK EXPERIENCE

Quality Analyst | Electronic Arts

Nov 2024 - May 2026

- **Performance, Regression, and Release Phase Testing (CI/CD & Live Ops):** Participated in the execution and monitoring of performance, stress, and stability testing across continuous deployment pipelines, focusing on stabilization (regression) and final release phases. Executed **Cross-Platform Compatibility** testing across all major market consoles and collaborated in large-scale Staging playtesting sessions using Risk-Based Testing to validate in-game store transaction flows, skin purchasing and rendering, wallet balance consistency across microtransactions, and crash prevention under high concurrency, certifying each deployment through smoke tests and regression suites.
- **Process Optimization, Team Coordination & Onboarding Impact:** Actively led and participated in the creation of a centralized knowledge base, technical documentation, and video tutorials that directly supported **reducing team onboarding and training cycles from 3 months down to 2 weeks**. Coordinated the assignment and prioritization of test suites tailored to each team member's technical strengths, enforcing clear test case specification standards and acting as a primary technical point of contact.
- **QA Reporting & Tooling:** Maintained an agile adaptation to the business tool migration from **TestRail** to **QMetry** as the test management standard. Designed custom dashboards and advanced queries using **JQL (Jira Query Language)** to monitor testing metrics, test execution progress, and team impediments in real time.
- **Live Operations & Root Cause Analysis:** Managed high-impact defect resolution and risk mitigation strategies for AAA titles under live deployment pressure. Performed extensive **Root Cause Analysis (RCA)** and technical investigations directly in QMetry and Jira to identify critical production defects ahead of official releases.
- **Server Provisioning, DevKits & Technical Triage:** Configured and provisioned dedicated test servers (adjusting custom runtime configurations and network ports) to enable simultaneous team connections for multiplayer testing, while configuring proprietary **DevKit** software across console platforms and exploring operational workflow automation (n8n-style). Contributed actively to the Jira Triage process, isolating and categorizing bugs to streamline decision-making for Leads and Producers.

Technical Support Analyst | Teleperformance (Expedia Account)

Mar 2024 - Oct 2024

- **Technical Incident Resolution & Troubleshooting:** Delivered bilingual technical support (English/Spanish) for global PMS and CRM platforms under strict **SLA** compliance and follow-up commitments, isolating functional and UI failures (such as asset loading and text persistence issues) across hotel reservation flows and partner management portals.
- **Transactional Audit & Platform Reconciliation:** Audited and tracked payments, customer refunds, and bank chargebacks across 4–5 internal financial platforms to guarantee data consistency and transactional integrity.
- **Technical Triage, Documentation & Escalation:** Authored detailed English defect reports in **Salesforce** (steps to reproduce, transaction IDs, screenshots, server responses, HTTP error codes, and audit logs), accurately classifying and routing each case to the appropriate engineering team to prevent ticket bounce-backs and expedite bug fixes.

Web Developer | LaLicorera.com

Aug 2022 - Aug 2023

- **Backend Development, Clean Architecture & Unit Testing (TDD):** Contributed to the end-to-end implementation and refactoring of RESTful endpoints using PHP (**Laravel**), building decoupled layers under **Clean Architecture (DDD)** principles (Controllers, Services, Repositories, Entities) and advocating for **DTO** usage. Implemented **unit tests under a TDD approach** to validate business logic and accurate state updates across domain objects.

- **SQL Database Validation & Internal Back-Office Systems:** Directly verified data persistence, referential integrity, and storage records using **MySQL Workbench** and **phpMyAdmin**, supporting internal administrative modules for inventory management and the accounting product price adjustment application.
- **API Documentation & Postman Testing:** Designed, executed, and thoroughly documented **Postman** collections for every developed module, validating data contracts, JSON payload structures, HTTP status codes, and conducting manual concurrency and idempotency testing against repeated request submissions.
- **Vue.js Frontend Refactoring, Web Performance & New Features:** Rapidly transitioned from a React background into the **Vue.js** ecosystem (leveraging Redux/Vuex-style state management, UI component frameworks, and component lifecycle hooks), refactoring large monolithic files (+500 lines) into modular objects and components. Led e-commerce page load optimization by transforming heavy image assets into **WebP** format, and developed end-to-end into production the commercial **custom laser bottle engraving** feature.

Software Developer Trainee | Globant
Mar 2019 - Sep 2019

- **Backend Development with Java, Spring Boot & Hibernate (ORM):** Built and structured backend services using **Java and Spring Boot** for an internal sports event management application, applying foundational **Clean Architecture** principles, annotation-based configuration, and relational **MySQL** database integration via **Hibernate (ORM)**. Implemented custom **DTOs (Data Transfer Objects)** to structure and expose tailored data based on user roles while handling input validation and null references.
- **React Frontend Development & Engineering Standards:** Developed user interface components using **React and JavaScript**, integrating backend service consumption and strengthening technical autonomy through intensive reading of official English documentation and collaborative workflows in enterprise environments.

Technical Initiatives & AI Engineering Projects | *Independent*
Currently

- **E2E Test Automation Architecture (Playwright & TypeScript):** Designing scalable test automation suites leveraging **Playwright with TypeScript**, implementing the **Page Object Model (POM)** pattern to separate element locators and page actions from test scripts for improved maintainability. Preparing API testing workflows using **Postman** for REST endpoint and payload validation.
- **Local LLM Environment & Modelfile Customization:** Configured and deployed local AI environments using **Ollama** and **OpenCode**. Customized model behaviors, context windows, resource allocation, and parameter tuning (e.g., temperature optimization for deterministic outputs) via custom **Modelfiles** to support secure, offline QA operations.
- **AI-Assisted QA Operations & Prompt Engineering:** Leveraged structured Prompt Engineering frameworks (**RTF**, **CREATE**) alongside **Agent Skills** and **Model Context Protocol (MCP)** to integrate local LLMs with workspace file I/O, automating edge-case test suite generation, synthetic JSON mocks, and code review assistance for automation scripts.
- **Testbed Architecture & Unit Testing Playground:** Designed and built an independent backend testbed using **Node.js** and **TypeScript** structured under Clean Architecture principles. Developed isolated unit test suites using **Vitest** and repository mocks to validate business invariants and use cases, establishing the architectural foundation for End-to-End automation with Playwright.

EDUCATION

- **Bachelor's Degree in Systems and Computer Engineering** (In Progress)
  Universidad Central
- **Technologist Degree in Systems Development** (Graduated 2022)
  SENA – Servicio Nacional de Aprendizaje
- **Technical Degree in Software Programming** (Graduated 2019)
  SENA – Servicio Nacional de Aprendizaje

CERTIFICATIONS & SKILLS

Certifications

- Programming with Emphasis on Programming Skills – Universidad de Antioquia (800 hrs)
- Programming with Emphasis on Mobile App Development – Universidad de Antioquia (800 hrs)
- Design UX/UI – Universidad Nacional (400 hrs)
- ISTQB Certified Tester Foundation Level (CTFL v4.0) Candidate

Technologies & Ecosystem

- **QA & Management:** JIRA, QMetry (Dashboards & JQL), TestRail, Salesforce, Confluence, Scrum, Kanban, ISTQB Candidate, Regression Testing, Smoke Testing, Cross-Platform Compatibility Testing, Root Cause Analysis (RCA), Risk-Based Testing (RBT), TDD.

- **Development, Backend & Automation:** Playwright (Automation Architecture & POM), TypeScript, Node.js, Vitest, Postman (API Validation & Documentation), SQL (MySQL Workbench, phpMyAdmin), PHP (Laravel), Java (Spring Boot, Hibernate ORM), Vue.js (Vuex), React, JavaScript, DTOs, Clean Architecture / DDD, Test Server Provisioning & DevKits, n8n.
- **AI & Workflow Productivity:** Ollama, OpenCode, Model Context Protocol (MCP), LLM Integration, Modelfiles, Agent Skills, Prompt Engineering (RTF, CREATE).

Languages

- **English:** Fluent / CEFR B2 Certified (British Council)
- **Spanish:** Native

Soft Skills

Attention to detail, critical thinking, team coordination, technical mentoring, defect triage, data validation, cross-functional collaboration, knowledge sharing.
